

China Two-Wheeler Exports — Where They Go & How Fast

Official customs data (HS 8711 motorcycles & 8711.60 electric), China as reporter, 2019–2024. The primary source under all the secondary figures used elsewhere — explore destinations, value vs units, ICE vs electric, and growth.

36.7M

units exported 2024

40%

"electric" by value*

USA

#1 destination (\$1.75B)

192

destination markets

What this validates: the 2024 total (**\$14.5B / 36.7M units**) matches the Codex-validated \$14.53B figure exactly, and confirms the "36.76M units" is the full HS-8711 unit count. The standout: **Latin America is the #1 regional destination by value (~\$3.8B)**, ahead of Europe, North America, Africa and SEA — hard primary-data support for the LatAm thesis.

1 · THE WAVE

China's motorcycle exports, 2019–2024

Value rebounded to a record in 2024; units jumped to 36.7M. The dashed line is the "electric" (8711.60) value — but see the caveat: most of that is e-bikes to the US/Europe, not e-motorcycles.

2 · DESTINATIONS

Top 25 markets, 2024 — toggle value vs units

★ = our target markets. By **value** the US/Mexico/Europe lead; by **units** the cheap-bike emerging markets (Indonesia, Mexico, LatAm, West Africa via Togo) dominate.

3 · PREMIUM VS COMMODITY

Value per unit — who buys expensive vs cheap bikes

Each bubble is a destination (top 45). Up-and-left = high \$/bike (premium / e-bikes: US, Europe, Japan). Down-and-right = cheap commuter bikes at volume (emerging markets — the Chinese-ICE heartland). ★ = targets.

5 • MOMENTUM

Fastest-growing destinations, 2023→2024 (markets >\$40M)

Where Chinese 2W exports accelerated most by value year-on-year.

Data quality & caveats. (1) **"Electric" (8711.60) is likely e-bike-heavy** — its top destinations are the US/Netherlands/Germany/Poland/Japan, consistent with e-bikes rather than emerging-market e-motorcycles; but HS code alone *cannot prove* e-bike vs electric-motorcycle form. Don't read it as "e-motorbike exports." (2) HS 8711 includes mopeds/scooters. (3) China-reported export values (FOB); partner-reported imports differ (mirror gap). (4) **No 2025 in Comtrade yet** — 2024 is the latest complete year; "2025 YTD" figures elsewhere come from China's own customs (CCCM), not Comtrade. (5) **Regions are mapped from country codes**; "Other/unmapped" ≈ \$0.9B of misc/aggregate partners — exact regional \$ are approximate (LatAm #1 is robust). (6) **Trade data ≠ end-use** — it shows bikes crossing borders, not consumer-vs-fleet demand. Source: UN Comtrade free preview API, reporter=China(156), flow=Export. **Independently validated by ChatGPT Codex (2026-06-06):** totals, units, electric share & top destinations all reconcile exactly with the raw JSON.
