

LatAm Two-Wheelers — Consumer vs Fleet

Is motorcycle demand consumer-driven or fleet-driven? Answered from raw government APIs — Mexico (INEGI VMRC), Colombia (RUNT/datos.gov.co), Brazil (BCB credit). No owner-type field exists in open data, so these are the service-type & financing proxies — and all three converge.

MX INEGI · CO RUNT · BR BCB

no-token APIs

all consumer-dominated

99.5%

Mexico — motos "particular"

registered 2023; "de alquiler" (rental/fleet) only 0.3%. INEGI VMRC.

99.2%

Colombia — motos "particular"

RUNT registrations; vs 0.8% oficial. datos.gov.co.

83.1%

Brazil — consumer vehicle credit

PF vs PJ financing (Apr 2026); monthly 68–92% over the decade. BCB SGS.

The answer: consumer-driven. Three independent government sources agree — motorcycle *ownership* in LatAm is overwhelmingly individual/personal (Mexico 99.5% & Colombia 99.2% registered "particular"; Brazil financing 83% consumer). The registered rental/fleet category is tiny (Mexico "de alquiler" 0.3%). This is primary-data support for the asset-light consumer lead-gen thesis. Note: this is the **ownership** axis (who buys = the lead); commercial *use* (delivery) is higher, since gig riders buy & register their own "particular" bikes.

1 · BRAZIL FINANCING

Consumer (PF) vs company (PJ) vehicle credit, 2015–2026

New-lending concessions, R\$/month (BCB SGS 20673/20645). The line is the consumer share — note the trough at ~68% in Sep 2022 (still depressed 72–76% through 2023) as company/fleet financing (rental operators like Mottu) grew, then a rebound to ~83%.

2 • MEXICO REGISTRATIONS

Registered motorcycles: particular vs rental/fleet, 2000–2023

INEGI VMRC. The total moto market grew ~26.5× since 2000 (rental/"de alquiler" fleet only ~10×), yet the "particular" (personal-service) share stayed 97–99.5% — personal registration scaled *with* the market.

3 · CROSS-MARKET

Consumer share — all three markets

Different proxies (registration service-type for MX/CO; financing PF/PJ for BR) — all land in the 83–99.5% consumer range.

4 · BRAZIL CONSUMER FINANCING POOL

Active consumer motorcycle-consórcio quotas (PF)

BCB SGS 27469 — the one motorcycle-specific consumer-finance series. A standing ~2.1–2.5M-quota consumer pool.

Data & caveats. (1) **Owner-type (individual vs company) is not in any open source** — these are proxies: registration *service type* (particular vs alquiler/público/oficial) for MX/CO, and *financing* PF/PJ for BR. (2) Registration = stock in circulation; BR credit = all vehicles (car-dominated) except the moto-specific consórcio. (3) A gig courier's own "particular" bike counts as consumer (correct for the lead-gen/ownership axis) even if used for delivery. (4) **"Particular" ≠ a clean legal-individual owner** — it's a service-type that can include a company (persona moral) registering an own-account bike; treat it as a personal-use/purchase proxy, not a literal individual-vs-company split. (5) Colombia = cumulative RUNT; Mexico = 2023 annual; Brazil to Apr 2026. Sources: INEGI VMRC (no-token CSV), datos.gov.co Socrata, BCB SGS API — all live-tested + archived.

Independently validated by ChatGPT Codex (2026-06-06): all three markets' figures reconcile with the raw files, Mexico CSV parsing confirmed correct (no consumer/fleet swap), interpretation supported.

LatAm 2W Consumer vs Fleet — raw-data dashboard. Built 2026-06-06. Primary APIs: INEGI / RUNT(datos.gov.co) / BCB. Fetch + build scripts archived in outputs/data/latam-2w-consumer-fleet/.
